THOMSON REUTERS

ABOUT CORTELLIS COMPANY DETAILED PIPELINE REPORT

Thomson Reuters provides the knowledge, tools, and expertise to help support drug discovery and development activities, IP portfolio optimization, identification of licensing and partnering opportunities, delivery of successful regulatory submissions, and the ability to keep current with the rapidly-changing pharmaceutical and chemical markets, supporting informed, early decisions.

This report was created by Thomson Reuters, using information from *Thomson Reuters Cortellis™ for Competitive Intelligence*; a comprehensive, proven intelligence solution that leverages the most accurate, complete, and widely respected drug pipeline information.From drug discovery and development activities to patent reports, the latest deals, and partnering opportunities, *Cortellis* can provide the confidence to make the most informed business decisions, faster. *Cortellis for Competitive Intelligence* provides accurateand validated information on pharmaceutical and biotechnology companies globally, their drug pipelines, deals, patents, and clinical trials, plus breaking industry news and conference coverage. All contained in one simple, highly intuitive research platform.

Cortellis Company Detailed Pipeline reports are the second in a series of that track pharmaceutical and biotechnology companies worldwide. All *Cortellis for Competitive Intelligence* content is subject to the most comprehensive editorial review process available, conducted by scientists, pharma professionals, regulatory experts, and generics specialists. Featuring timely drug pipeline information expertly uncovered and integrated from over 400 global meetings each year, you'll always be on top of the latest developments.

Chosen by leading life sciences companies, their executives and investors, *Cortellis for Competitive Intelligence* accelerates your deal-making and gives you timely insights on the development landscape.

Discover undiscovered opportunities in drug development and licensing faster with *Thomson Reuters Cortellis™ for Competitive Intelligence*

GLOSSARY

Number of Drugs in Active Development

Number of drugs associated with the company or subsidiary that are currently in active development, i.e. the development status for the drug(s) is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Number of Inactive Drugs

Number of drugs associated with the company or subsidiary that are currently classified as inactive, i.e. where the development status for the drug(s) is one of the following: No Development Reported, Discontinued, or Withdrawn.

Number of Patents as Owner

Number of patents associated with the company where the company is listed as owner; i.e. the relationship type (or way the patent refers to the company) is: Patent Assignee/Owner, Patent owner (not assignee), Licensee for development and marketing, Licensee – marketing only (Distributor), Patent assignee of family member, Inferred assignee.

Number of Patents as Third Party

Number of patents associated with the company where the company is listed as third party; i.e. the relationship type (or way the patent refers to the company) is: Patent assignee (not owner), Ex-Licensee for development and marketing, Ex-Licensee marketing only (Distributor), Customer of technology, Ex-Customer of technology, Patent opponent or infringer, Affiliate organization of inventor, Owner of underlying technology.

Patents summary table

This table represents a summary of the core patent coverage for this company covering Therapeutic EP, US and WO patents since 1990 only.

Number of Deals

A count of deals where the company or one of its subsidiaries is the primary company.

Key Indications

Displays top ten key indications for the company and its subsidiaries based on frequency (indications occurring with high and identical frequency are always included, and this may result in more than ten Key Indications being listed). Includes both indications associated with patents where the company is patent owner and indications associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Key Target-based Actions

Displays top ten key target-based actions for the company and its subsidiaries based on frequency (actions occurring with high and identical frequency are always included, and this may result in more than ten Key Target-based Actions being listed). Includes both target-based actions associated with patents where the company patent owner and target-based actions associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended. A target-based action is one that is associated with a target.

Key Technologies

Displays top ten key technologies for the company and its subsidiaries based on frequency (technologies occurring with high and identical frequency are always included, and this may result in more than ten Key Technologies being listed). Includes both key technologies associated with patents where the company relationship is patent owner and key technologies associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Number of Drugs in Active Development	3
Number of Inactive Drugs	1
Number of Patents as Owner	17
Number of Patents as Third Party	2
Number of Deals	14
Key Indications	Asthma,Cancer,Chronic myelocytic leukemia,Rheumatoid arthritis,Cystic fibrosis,Hematological neoplasm,Inflammatory disease,Pseudomonas infection,Unidentified indication,Acute myelogenous leukemia,Chronic obstructive pulmonary disease,Pseudomonas aeruginosa infection
Key Target-based Actions	Epha3 tyrosine kinase receptor inhibitor,Immunoglobulin G1 modulator,Immunoglobulin kappa modulator,GM-CSF receptor antagonist,GM-CSF ligand inhibitor,VEGF receptor antagonist,ACE inhibitor,Acetylcholinesterase inhibitor,Beta amyloid antagonist,Complement C3 inhibitor,Complement Factor B inhibitor,DHFR inhibitor,EGF like module receptor antagonist,EPHA3 gene inhibitor,EPHA3 gene modulator,Epha3 tyrosine kinase receptor modulator,Epha3 tyrosine kinase receptor stimulator,Folate antagonist,Immunoglobulin G agonist,NMDA receptor antagonist,PcrV protein type III inhibitor,Prokineticin receptor-2 antagonist
Key Technologies	Monoclonal antibody humanized,Biological therapeutic,Infusion,Intravenous formulation,Antibody,Monoclonal antibody,Drug combination,Antibody fragment,Antibody polyclonal,Chimeric antibody

COMPANY PROFILE

SUMMARY

KaloBios Pharmaceuticals is engaged in the development of patient-targeted, first-in-class monoclonal antibodies designed to significantly improve the lives of seriously ill patients with difficult-to-treat diseases. Such uses include de novo discovery of high-affinity human antibodies, as well as optimization of antibodies and other therapeutic proteins. KaloBios has the capability to discover, engineer and develop clinically relevant antibodies, protein therapeutics, and small molecules, but is also actively seeking genomics, biotechnology and pharmaceutical collaborators to use its technologies, and to partner and co-develop its drugs.

ACQUISITIONS AND SPIN-OFFS

In January 2004, KaloBios merged with Celscia Therapeutics. The resulting company was named KaloBios.

LICENSING AGREEMENTS

In October 2008, BioWa licensed non-exclusive rights to its POLLITIGENT platform to KaloBios Pharmaceuticals for enhancing the antibody-dependent cellular cytotoxicity of select KaloBios therapeutic antibodies.

In April 2007, Novartis non-exclusively licensed KaloBios' Humaneering technology for the development of human antibodies. KaloBios had previously humanized three antibodies for Novartis, and would generate three more. In May 2006, KaloBios humanized an antibody against an undisclosed target for Novartis. The companies also extended their agreement. KaloBios received research and success fees and would receive milestones and royalties.

In June 2004, KaloBios licensed a murine monoclonal antibody for the potential treatment of Pseudomonas aeruginosa infection from the Medical College of Wisconsin and the University of California San Francisco.

Return to Table of Contents

FINANCIAL

In January 2013, the company priced the initial public offering of 8,750,000 shares of common stock at a price of $8 each to the public. The underwriters were granted a 30-day option to purchase up to 1,312,500 additional shares at the same price to cover over-allotments, if any. In February 2013, KaloBios completed the initial public offering, raising gross proceeds of $70 million, and net proceeds of approximately $62 million.

In October 2012, the company was planning an IPO of its stock.

In September 2012, the company had completed a $10 million long-term debt financing with MidCap Financial SBIC and also the company have the option to borrow an additional $5 million by the end of the second quarter of 2013.

By September 2012, the company had raised gross proceeds of $20.25 million from the closing of series E financing round.

In September 2008, KaloBios raised $20 million from a series D financing round. In December 2008, the company raised a further $12 million from the financing.

In July 2007, KaloBios completed a $20 million series C financing round.

In March 2005, KaloBios completed a $20 million series B financing. Proceeds from the financing would be used to build a clinical development team and to progress two lead antibodies into clinical evaluation.

KB-003 DEVELOPMENT PROFILE

SUMMARY

KaloBios, under license from the Ludwig Institute for Cancer Research, is developing the anti-GM-CSF human IgG1 kappa monoclonal antibody KB-003, a Humaneered (engineered human antibody) version of the prototype antibody KB-002, for the potential treatment of inflammatory diseases such as rheumatoid arthritis (RA) and asthma, and also for an undisclosed indication,. The company is also investigating the mAb for the potential treatment of chronic myelomonocytic leukemia. In December 2009, a phase II trial began in patients with RA. By May 2011, a phase IIb trial for KB-003 had been initiated for an undisclosed indication. In September 2012, a phase II trial for asthma was initiated. In July 2011, the company was seeking to outlicense KB-003.

In November 2006, a phase I RA trial of KB-002 began ; in May 2008, the drug was listed as in phase I/II for this indication of the company's pipeline ; by May 2011, the trial had been completed. In March 2008, a phase I/II trial of KB-002 for persistent asthma began ; by May 2011, the trial had been completed. In May 2008, the company planned to cease development of KB-002 in 2008 ; by July 2011, development of KB-002 was presumed to be ceased as the company planned to concentrate on KB-003 for all the future developments.

The company was previously investigating anti-GM-CSF antibodies for the potential treatment of multiple sclerosis, chronic obstructive pulmonary disease, psoriasis and Alzheimers disease; however, no further development was reported for these indications since 2009.

KB-001 DEVELOPMENT PROFILE

SUMMARY

Sanofi Pasteur (a division of Sanofi) and KaloBios, under license from the University of California San Francisco, are developing the iv PcrV-neutralizing KB-001 (KB-001A), the lead in a series of Humaneered PEGylated monoclonal antibody fragments that includes 1A8, for the potential treatment of life-threatening Pseudomonas infection ,. KaloBios is also developing the drug for the potential treatment of cystic fibrosis. As of January 2010, Sanofi Pasteur would focus on hospital-acquired infections, including prevention in mechanically-ventilated patients, while KaloBios would remain focused on treating infections in patients with cystic fibrosis and bronchiectasis. In January 2013, a phase II trial was initiated with cystic fibrosis patients with Pseudomonas auregenosa infections and at that time, results were expected in mid-2014 . In March 2008, a phase I/II trial in cystic fibrosis patients with Pseudomonas infections was initiated ; by June 2011, the drug had completed phase I/II for cystic fibrosis. A second phase I/II trial began in May 2008 ; in June 2012, results from the phase IIa trial were reported. In June 2012, Sanofi was planning for larger clinical trials for Pseudomonas aeruginosa infection in mechanically-ventilated patients. In January 2013, KaloBios was planning to develop a sc formulation of KB-001.

KB-004 DEVELOPMENT PROFILE

SUMMARY

KaloBios is developing KB-004, an IgG1 kappa monoclonal antibody that binds to the EphA3 tyrosine kinase receptor expressed on the surface of tumor cells, engineered using the company's Humaneering technology, for the potential iv infusion treatment of cancer, including hematological malignancies,. By January 2011, a phase I trial in patients with hematological malignancies had been initiated ; in January 2013, the drug was listed as being in phase I development. In July 2011, the company was planning on seeking to outlicense its programs while retaining rights to patient-targeted orphan indications in the US.
