EDISON

Onconova Therapeutics

Quarterly update

Important ONTIME disclosure

Pharma & biotech

Onconova clarified on its Q413 call that the subgroup in which rigosertib showed a statistically significant survival benefit over BSC was predefined for secondary analysis, adding more credibility to the benefit seen and raising the possibility of a conditional approval for this substantial group of higher-risk MDS patients. The company plans to meet the FDA and EU regulator in Q214 and provide a regulatory update. Onconova ended 2013 with cash of $100m, enough to support its operation beyond 2014.

Year end	Revenue ($m)	PBT* ($m)	EPS* ($)	DPS ($)	P/E (x)	Yield (%)
12/12	46.2	(30.3)	(15.51)	0.0	N/A	N/A
12/13	4.8	(62.2)	(6.05)	0.0	N/A	N/A
12/14e	4.0	(65.1)	(2.96)	0.0	N/A	N/A
12/15e	4.0	(67.2)	(2.99)	0.0	N/A	N/A

Note: *PBT and EPS are normalised, excluding intangible amortisation, exceptional items and share-based payments.

Subgroup predefined

Onconova confirmed that the subgroup in which rigosertib demonstrated a statistically significant overall survival (OS) benefit over best supportive care (BSC) was predefined in the trial's protocol. Pre-definition of a subgroup adds more credibility to the benefit that is seen with the treatment as compared to the so-called "post-hoc" analysis. Because the benefit was clinically meaningful (a median OS difference of 3.8 months with an HR of 0.67 and a p-value of 0.022) and this substantial group of patients (those who progressed on or failed to respond to previous treatment with hypomethylating agents (HMAs) accounted for c 62% of all patients enrolled) have the poorest prognosis, we believe there is a possibility that rigosertib could gain conditional approval in the US based on this data, with a commitment of confirmatory Phase III trial.

ASCO presentation will shed more light on the data

Onconova will present pre-clinical data at the AACR annual meeting from 5-9 April in San Diego that supports the drug's new mechanism of action, which is under-appreciated by the market, in our opinion. Data from the Phase III ONTIME trial will be presented at the upcoming ASCO annual meeting from 30 May to 3 June in Chicago. Detailed data such as response rate and post-trial treatment differences may help explain why the drug succeeded in the non-responder subgroup but failed in the intend-to-treat (ITT) population, building a scientific case for the FDA to consider an approval of the drug for the subpopulation.

Valuation: Near-term upside with rigosertib update

Our valuation of the company is $311m, or $14.5/basic share, which is increased slightly from our previous valuation at $303m based on higher estimated 2014 year end cash. Our pipeline value remains at $272m with a 50% probability of success of rigosertib in higher-risk MDS. A conditional approval of the drug based on the benefit seen in ONTIME would increase the value to $426m, or $19.9 per share.

Business description

Onconova Therapeutics is a clinical-stage biopharmaceutical company focused on developing novel small molecule drug candidates to treat cancer. Its lead drug candidate, rigosertib, is partnered with Baxter (Europe) and SymBio (Japan/Korea) and is in a Phase III trial for higher-risk mylodysplastic syndrome (MDS) (IV form), and in Phase II for lower-risk MDS (oral form).

Onconova datasheet

Exhibit 1: Onconova pipeline summary

Drug	Indication	Status	Notes
Rigosertib	Higher-risk MDS after HMA (IV)	Top-line results announced: missed primary endpoint; subgroup analysis suggests OS benefit in HMA non-responders, a predefined subgroup.	Licensed to **Baxter** (total earnable payments of $600m) for Europe, and **SymBio** (total earnable payments of $50m) for Japan/Korea. Onconova retains all rights elsewhere (including in the US). Temple University is entitled to 25% of sub-licence fees from Baxter and SymBio and a low single-digit royalty on net sales.
	Lower-risk MDS (oral)	Phase II final results at ASH	
	Refractory head and neck cancer (oral)	Phase II single arm, first results: 2014	
ON 013105	Refractory lymphoma, solid tumours	Phase I (solid tumour)	Cyclin D1 targeting agent. Studies could resume in Q114.
Recilisib	Acute radiation syndrome	Phase I ongoing	Collaboration with the US Department of Defense for radiation-induced cytopenia. Expected to be licensed out early.

Source: Edison Investment Research. Notes: Only clinical-stage assets shown.

Exhibit 2: Ongoing rigosertib clinical trials

Trial name	Patients	Treatment	Details
ONTIME (04-21)	MDS, Vidaza or Dacogen failure	Rig (CI, 3-d Q2W for eight cycles or Q4W after eight cycles) plus BSC vs BSC alone	299-pt Phase III shows median OS of 8.2 vs 5.8 months, HR= 0.86, p=0.27. Post hoc analysis suggests OS benefit in HMA non-responders (median OS of 8.5 vs 4.7 months, HR of 0.67, p=0.022).
ONTARGET (09-05)	MDS, TD, low, Int-1 or trisomy 8 Int-2	Oral, 560mg bid for two weeks Q3W	60-pt Phase II, single arm, primary endpoint: units of blood cell transfusions at week eight. Start: May 2012, results: Oct 2014.
09-08	MDS, AML and CML	Oral, various doses bid for three weeks Q4W; plus Vidaza	40-pt Phase I/II, primary endpoints: safety. Trial start: Aug 2013. Results: Aug 2015.
09-09	Squamous cell carcinoma, refractory	Oral, 560mg bid for two weeks Q3W	80-pt Phase II, primary endpoint: ORR; trial start: March 2013. Results: Sept 2015.
09-07	MDS, transfusion dependent, low, Int-1	Oral, 560mg bid for two weeks Q3W	40 pt Phase II, primary endpoints: HI. Trial start: July 2013. Results: June 2015.
04-24 (ONTIME)	MDS, failure after Vidaza or Dacogen, excess blasts	CI, 1,800mg/m^2 for three days Q2W (eight cycles) or Q4W (after eight cycles)	90 pt Phase IIIB, primary endpoint: relationship between bone marrow response and survival. Start: Aug 2013. Results Dec 2015.

Valuation

We have updated our valuation of Onconova after the Q413 results. The pipeline valuation remains the same with a clinical success probability of 50% and 35% for second-line, higher-risk MDS and lower-risk MDS, respectively. Peak sales for rigosertib IV for second-line, high-risk MDS is $305m, and oral rigosertib for lower risk MDS is $1bn. This approach yields an intrinsic value of $272m for the pipeline. Adding forecast year-end 2014 cash of $39m yields a total value of $311m, equivalent to $14.5 per basic share ($13.8 per diluted share). Previously, we had valued Onconova at $303m, or $14.1 per basic share ($13.5 per diluted share).

Financials

Onconova reported a net loss of $14.6m for Q413, including G&A expenses of $4.4m and R&D costs of $12.1m. Cash burn for the quarter was $7.1m. The total loss for the year was $62.2m, including G&A expense of $16.8m and R&D expense of $50.2m. Cash burn for the year was $61m. The company ended 2013 with cash and cash equivalents of $100m. We have changed our 2014 forecast slightly based on actual Q413 results and we now estimate the company's cash utilisation will be $61.3m in 2014 and it will end the year with cash of $39m, assuming no rigosertib-related milestone payment in 2014. We previously estimated cash utilisation of $68m in 2014 and year-end cash of $31m.
