## Intrexon Corporation

**Buy**

Company Update : Biotechnology

### Intrexon Gains a Blue Chip Partner

- Intrexon has entered into a research & development collaboration with a division of Johnson & Johnson, the Consumer & Personal Products Worldwide unit, to advance new skin and hair care products. The exact nature of the products and the work that Intrexon will perform have not been disclosed. We note, though, that the Consumer & Personal Products division is responsible for cosmetics and over-the-counter drugs and devices, which means that at least some of the new offerings may need to meet the less-demanding regulatory hurdles of cosmetics versus those required of prescription medicines.
- Several revenue streams may come from the collaboration, since the companies intend to advance multiple products for skin and hair care. The deal is also meaningful for it creates an opportunity for Intrexon to demonstrate that it is a good partner and that could lead to collaborations with other J&J business units. Then, too, the validation that comes from an alignment with a blue chip company opens the door for Intrexon to collaborate with other multinational corporations.
- Two other deals were completed recently and more are expected in the next 12 months. Intrexon entered into collaborations with OvaScience to assist in the preparation of new treatments for infertility and improving human and animal health. The second agreement is with a newly formed company, Agilis Biotherapeutics, that is developing therapies for rare genetic diseases. Friedreich's ataxia, which is a neurodegenerative condition caused by a mitochondrial anomaly, is the companies' initial target indication.
- Intrexon has offered to acquire a small stem cell company, Medistem, for stock and cash. The deal, which should close soon, will expand the Company's technology base in the emerging field of regenerative medicine.
- Overall, we consider these deals to be important in the furtherance of Intrexon's strategy to commercialize its expertise in synthetic biology as rapidly and broadly as possible. Since our financial projections have been based on an assumption that multiple collaborations would be formed, we have not changed our estimates.

## 2013 Closes with Several Noteworthy Agreements

Intrexon was busy at the close of the year, signing new R&D collaborations and making an offer to acquire Medistem, a small company with expertise in stem cell therapies. We believe one agreement is of special strategic significance – the deal with Johnson & Johnson.

### A Blue Chip Collaboration Completed

The most important deal yet, in our opinion, is a research & development agreement with a Johnson & Johnson (NYSE: JNJ) division for advancing new skin and hair care treatments. The types of products involved have not been disclosed, but the J&J business unit is called Consumer & Personal Products Worldwide. That division is responsible for cosmetics and over-the-counter drugs and devices, with \$3.6 billion of sales coming from skin care products alone in 2012 and hair care products contributing to the \$2.3 billion of sales from J&J's baby care lines.

It seems likely that many, if not all, of the products involved in the collaboration will be regulated as cosmetics, which face considerably less onerous regulatory hurdles than those encountered by over-the-counter and prescription drugs. Indeed, products that fall into the cosmetics category (except color additives) do not require FDA approval prior to marketing, though the companies are legally responsible for ensuring these products are safe and that claims on the labels are consistent with their cosmetic nature.

Intrexon's contribution to the collaboration has not been disclosed publicly. However, there are probably several ways in which the Company's technology could be used. First, synthetic biology may offer a means of producing large quantities of a natural substance that is not readily available otherwise. The technology also offers an opportunity to create an analog that is patentable and offers an improved safety and/or efficacy profile. Then, too, Intrexon's technologies can be used to reduce manufacturing costs. Since these capabilities are not mutually exclusive, any combination of these capabilities may be the rationale for J&J's entering into the collaboration.

Terms of the agreement have not been disclosed, but management has indicated that they are similar to those of other deals, meaning that Intrexon will receive an upfront fee, milestone payments, and royalties. Given the worldwide nature of Johnson & Johnson's business, the financial rewards from the collaboration will probably be significant. However, the deal is also meaningful for other reasons. For one, it creates an opportunity for Intrexon to demonstrate that it is a good partner and that could lead to collaborations with other J&J business units, perhaps involving new biomaterials and/or prescription medicines. Then, too, the validation that comes from an alignment with a blue chip company opens the door for Intrexon to collaborate with other multinational corporations.

### A New Joint Venture Forms for Infertility Treatments

Intrexon entered into a joint venture with OvaScience (NasdaqGM: OVAS) to accelerate the development of OvaScience's OvaTure<sup>SM</sup>, which is a technology platform for *in vitro* fertilization using the woman's own egg precursor cells that are found in the outer edge of the ovaries. OvaScience uses proprietary methods to identify, isolate, and mature the precursor cells into high quality eggs for *in vitro* fertilization without the need for hormone treatments. The first goal of the joint venture is to develop methodologies to enable the accelerated and scalable development of OvaTure. This phase of the collaboration will rely heavily on Intrexon's ability to optimize culture conditions for maturation of the egg precursor cells to improve the quality of eggs used for *in vitro* fertilization and thereby increase the fertilization rate and reduce the risk of subsequent difficulties, including spontaneous abortions. The results of this work will likely be applicable to animal husbandry as well. As such, we believe this program will begin to generate royalties for Intrexon within the next few years.

A second aspect of the collaboration is to develop therapeutics for the prevention of inherited diseases in humans such as mitochondrial and other genetic disorders. For this, Intrexon will employ its genome engineering technologies, including the UltraVector<sup>®</sup>, RheoSwitch<sup>®</sup>, Cell Systems Informatics, and Leap<sup>SM</sup>, while OvaScience will contribute its egg precursor cell platform. The development time for these therapies will probably be rather prolonged.

## ECC with Agilis Biotherapeutics Targets Rare Genetic Disease

Intrexon recently entered into a collaboration with a newly formed company, Agilis Biotherapeutics, to develop a DNA-based therapy for Friedreich's ataxia. This progressive neurodegenerative disease is an autosomal recessive disorder characterized by suboptimal expression of a mitochondrial protein called frataxin. Patients are typically diagnosed between the ages of 5 and 15 with symptoms that can include difficulty walking, slurred speech, a loss of sensations in the extremities, scoliosis, and diabetes. Friedreich's ataxia often confines the individual to a wheelchair within 10 to 20 years of diagnosis and shortens the person's life expectancy due to heart disease. In the United States, the disease afflicts an estimated 5,000 to 10,000 patients. At this juncture, there is no treatment for the disease, but related conditions (e.g., scoliosis, diabetes, heart conditions) are treated as encountered.

Intrexon's UltraVector platform and RheoSwitch will play crucial roles in the development of the treatment, which may take the form of a gene therapy. An alternative intervention may be genetically modified cells, given the systemic nature of the disease. Indeed, the sensory nervous system appears to be affected initially, with secondary degeneration of a neural tract in the spine leading to the brainstem and cerebellum. Other tissues that consume large quantities of energy, including the heart and pancreas, are also often affected, since mitochondria normally serve as an essential energy source to cells throughout life. The progressive nature of the disease is probably related to a gradual loss of mitochondrial function caused by insufficient frataxin and damage from oxidative stress.<sup>1</sup>

Key to understanding Friedreich's ataxia and pursuing potential therapeutic interventions is identifying where the direct effect of low frataxin levels is altering tissue function. In the nervous system, that is not always a straightforward determination, since neurons can extend over great distances, connections for incoming and outgoing signals are essential to cell survival, and many neurons rely on support cells called glia for functional and nutritional support. The early descriptions of the disease discussed the presence of spindly sensory nerves, spinal tract degeneration, and neural atrophy in the cerebellum. Recent studies have determined that the numbers of axons (i.e., neural projections) in a major sensory nerve are similar in patients with Friedreich's ataxia and normal individuals.<sup>2</sup> But the disease is associated with significantly fewer myelinated axons, and disease progression is marked by the loss of these fibers, which probably translates directly into the sensory neuron dysfunction that is manifested clinically. The loss of glial support cells might also contribute to the heart conditions associated with the disease, since scientists have recently determined that glia-derived neurotrophic factor plays an important role in the establishment of functional contacts between nerves and heart muscle.<sup>3</sup>

An important advance was recently achieved with cell cultures that should facilitate Agilis and Intrexon's work. It is possible to create induced pluripotent stem cells from the fibroblasts of a Friedreich's ataxia patient that retain the genetic and phenotypic traits of the individual.<sup>4</sup> Moreover, those stem cells can be induced to differentiate into neurons and heart cells to study the disease and possible therapies at a cellular and molecular level under controlled conditions.<sup>5</sup> Further, stem cells from a healthy individual release a trophic factor(s) that protect cells from Friedreich's ataxia patients from oxidative stress under experimental conditions.<sup>6</sup> Sensory neurons cultured from an animal model of the disease are also protected by neurotrophic factors identified in the culture medium.<sup>7</sup> Thus, basic groundwork has been laid for Agilis and Intrexon to investigate potential therapies for Friedreich's ataxia.

Agilis has the option to advance a second undisclosed rare disease indication under its agreement with Intrexon. Success with Friedreich's ataxia might pave the way for programs dedicated to related ataxias or hereditary demyelinating diseases, such as leukodystrophies. We note that on December 31<sup>st</sup>, Agilis announced that it had raised \$8 million to pursue the Friedreich's ataxia program.

## Medistem Acquisition Nears

The Company has offered to acquire a small stem cell company, Medistem (OTCQB: MEDS), for approximately \$26 million in cash (\$0.27 per share) and stock (\$1.08 value). The deal, which has the support of major investors, is expected to close within the next few weeks. Medistem would give Intrexon expertise in stem cells generally and a patented line of cells derived from endometrial tissue that could be used for a myriad of purposes. The acquisition will not have any effect on the relationship that Intrexon has with Ziopharm Oncology (NasdaqCM: ZIOP), which entered into a partnering agreement with the Australian stem cell specialist Mesoblast (ASX: MSB) last year. We will provide a more complete discussion of the Medistem technologies upon consummation of the deal.

## Intrexon – Prepared for More Deals

Near the close of 2013, Intrexon bolstered its infrastructure with the hiring of an experienced executive, Dr. Peter Seuffer-Wasserthal, to oversee business development in Europe and Asia. The other important addition to the team was Ms Dana Di Ferdinando who will head the development of the next-generation UltraVector platform that will include a software-based communication link between Intrexon and its partners. That link should strengthen ties to existing collaborators and appeal to potential clients, based on the efficiencies that should be realized. Thanks in part to these new additions, we believe Intrexon is better prepared to negotiate and collaborate globally in its targeted fields of food, energy & chemicals, healthcare, agriculture, and environment.

## Investment Considerations

The investment community is anxiously awaiting news of collaborations, particularly with more blue chip corporations. The Johnson & Johnson agreement validates the Company's technologies and opens the door to more deals. We believe 2014 will be an important year for such agreements, as the momentum is building with the J&J signing, the addition of an executive to administer business development overseas, and the rollout of the new communication link in the new UltraVector software. New collaborations, plus the likelihood of royalty streams commencing by 2016, should pique the investment community's interest in Intrexon shares. Accordingly, we are maintaining our BUY recommendation and our \$36.00 price target.

## Financial Forecasts & Valuation

Since our last report, dated November 8, 2013, Intrexon has made significant progress with its collaborations, but our estimates already took into account the recent developments. Accordingly, we have not changed our financial forecasts or valuation. A complete discussion of our estimates is provided in our initiation report dated September 30, 2013 (available at [www.griffinsecurities.com](http://www.griffinsecurities.com)).

(“Griffin Securities”) a FINRA member firm with its principal office in New York, New York, USA is an investment banking firm providing corporate finance, merger and acquisitions, brokerage, and investment opportunities for institutional, corporate, and private clients. The analyst(s) are employed by Griffin Securities. Our research professionals provide important input into our investment banking and other business selection processes. Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients that reflect opinions that are contrary to the opinions expressed herein, and our proprietary trading and investing businesses may make investment decisions that are inconsistent with the recommendations expressed herein.

Griffin Securities may from time to time perform corporate finance or other services for some companies described herein and may occasionally possess material, nonpublic information regarding such companies. This information is not used in preparation of the opinions and estimates herein. While the information contained in this report and the opinions contained

herein are based on sources believed to be reliable, Griffin Securities has not independently verified the facts, assumptions and estimates contained in this report. Accordingly, no representation or warranty, express or implied, is made as to, and no reliance should be placed on, the fairness, accuracy, completeness or correctness of the information and opinions contained in this report.

The information contained herein is not a complete analysis of every material fact in respect to any company, industry or security. This material should not be construed as an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. We are not soliciting any action based on this material. It is for the general information of clients of Griffin Securities. It does not take into account the particular investment objectives, financial situations, or needs of individual clients. Before acting on any advice or recommendation in this material, clients should consider whether it is suitable for their particular circumstances and, if necessary, seek professional advice. Certain transactions - including those involving futures, options, and other derivatives as well as non- investment- grade securities - give rise to substantial risk and are not suitable for all investors. The material is based on information that we consider reliable, but we do not represent that it is accurate or complete, and it should not be relied on as such. The information contained in this report is subject to change without notice and Griffin Securities assumes no responsibility to update the report. In addition, regulatory, compliance, or other reasons may prevent us from providing updates.

**DISCLOSURES FOR OTHER COMPANIES MENTIONED IN THIS REPORT:** To obtain applicable current disclosures in electronic format for the subject companies in this report, please refer to SEC Edgar filings at [www.SEC.gov](http://www.SEC.gov). In particular, for a description of risks and uncertainties related to subject companies' businesses in this report, see the "Risk Factors" section in the SEC filings.
